

Task 2, Requirements for FR-ST-6 (Participation in events)

Introduction:

The following document defines the quality requirements for the functional requirement, FR-ST-6.

This function will allow users to find events, register for them, purchase tickets, and subscribe to receive announcements and updates using the USU student app. This feature must be scalable, fast, reliable, and secure for students across all universities.

Quality Requirements:

1. Scalability

The system should be able to handle a growing number of users on the platform without affecting performance.

The system should be modular to allow for updates and fixes without altering any code beyond what is required.

The system should be designed to scale without any difficulty, using cloud servers.

2. Performance

The system should not slow down when thousands of concurrent users are accessing the platform

The system should proceed with ticket purchases and registration in real time without major delay

The system should load search results within 3 seconds to create a fast and easy experience

3. Reliability

The system must be available 99% of the time, making it a reliable platform that students can trust

Backups of user details should be made to prevent any data loss

If a payment method fails, the system should be able to recover and notify the user

4. Security

The system should protect personal data during registration and purchases in according to the General Data Protection Act

User data, such as names or contact details, should be encrypted and stored safely

Payment processing should be done by a secure and encrypted payment service

The quality requirements stated are to ensure the feature is scalable, fast, reliable, and secure, with the ability to grow as more users join the platform. Meeting these requirements will help to create a smooth and trusted experience for users.
